

Bioversity  
International:  
Maccarese,  
Rome, Italy

Allison Conwell '17

# My Internship Consisted of...

- So much reading!
- Learning about modern perspectives regarding defining biodiversity and how to best manipulate them in agroecosystems.
- Writing a literature review relating biodiversity to pest and disease control in crops and pollinators in agroecosystems.
- Presenting my paper to my supervisor and other scientists working for Bioversity International.

# The Best Parts Were...

- Finding out how NGOs worked through experience.
- Interacting with scientists who wrote some of the pieces I was reading.
- Interacting with the rest of the workforce through the different divisions of the company; the work environment was wonderful.

# What My Work Went Toward...

- Beginning discussion with scientists across the company (and the world) about how to manipulate biodiversity to affect pest and disease control in agroecosystems.
- Contributing to another paper comparing bioeconomic models.

# My Academic Life...

- My work reinforced my decision to concentrate in Ecology and Evolutionary Biology.
- The structure of my internship was similar to writing a JP or a thesis, so I feel that I am more prepared for those.
- I learned that I could be okay working a typical 9 to 5 job.
- I want to pursue a career in science.

# Cultural Awareness Tips

- Just because you know a language that's related to it doesn't mean that you know the language of the country that you're going to.
- Learn all you can about the ways you use to get to work.
- Learn your rights as a tenant in the country that you're going to.

# Personal Growth

- How to keep a friendly yet professional relationship between myself and my superiors
- Depending on myself for meals instead of going out to eat all the time
- Putting every monetary lesson I've ever had into practice through living on my own
