Project Overview

- ∞ Computational model of protein
- ∞ Compiling relevant scientific literature into paper
- ∞ Presentation at the 5th Visegrad Conference

Colleagues at Work

Most Rewarding Experience

Examples of Project Work

Constructed a 3D computational model of the protein EcoR124I, which was being studied in the Wet Lab of the Institute for Nanobiology

3D Printing my Protein

Impacting the Institute

- ❧ My final research will be incorporated into a published scientific paper!
- ❧ Discovered new orientations of protein subunits
- ❧ Compiled all the relevant literature on EcoR124I into a comprehensive paper to facilitate research
- ❧ Designed a preliminary model of EcoR124I that addressed flaws in previous modeling attempts
- ❧ 3D Printed my protein to visualize steric clashes

Impact on my Education/Career

- ❧ This internship exposed me to the wide variety of applications for computer science and computational research
- ❧ Made me appreciate the work that goes into publishing a scientific paper and graduate school
- ❧ Made me realize that even though I had an incredible experience, I might not be cut out for academic research

11 Countries in 11 Weeks

Overall Reflection

- ❧ This internship allowed me to understand the full international scope of scientific collaboration and research
- ❧ Travelling to 11 countries exposed me to so many new cultures and made me a more conscientious citizen
- ❧ Afforded me the first opportunity to live and work independently for an entire summer by myself!
- ❧ Had an absolutely incredible time meeting new friends, professors, and researchers around the world
